

## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **LISTING OF CLAIMS:**

Claims 1 to 5. (Canceled).

6. (New) A method for adjusting a temperature of a motor vehicle seat to at least one predetermined desired value, the motor vehicle seat including a seat ventilation system and a seat heater, comprising:

detecting the temperature of the seat in a region of a seat surface by a first temperature sensor;

detecting an outside temperature by a second temperature sensor;

switching off the seat ventilation system below a first temperature threshold for the outside temperature; and

switching off the seat heater above a second temperature threshold for the outside temperature.

7. (New) The method according to claim 6, wherein a value for the first temperature threshold is equal to a value for the second temperature threshold.

8. (New) The method according to claim 6, wherein the predetermined desired value for the temperature of the seat has a value between 32.5°C and 35.5°.

9. (New) The method according to claim 6, further comprising setting the predetermined desired value for the temperature of the seat as a function of the outside temperature.

10. (New) The method according to claim 6, further comprising:  
adjusting the temperature of the seat to an upper desired value below the first temperature threshold for the outside temperature; and  
adjusting the temperature of the seat to a lower desired value above the second temperature threshold for the outside temperature, the lower desired value

smaller than the upper desired value, the lower desired value and the upper desired value in a temperature range between 32.5°C and 35.5°.
